

ALU axxent

Aluminium window systems are synonymous with durable functionality and exceptionally long service life. This makes them the perfect basis for complex architectural concepts that require the utmost planning and design freedom.

With ALU axxent, the fully concealed hardware product line, you're not only well prepared for architectural challenges. You also benefit from all of the advantages of our modular system.

The greatly reduced number of individual components and the high degree of pre-assembly allows you to optimise your workflows. At the same time, the fully concealed ALU axxent series can be combined with the entire ALU system's universal range of accessories as required. From rose-free handles to intruder resistant windows up to RC2 with integrated electronic locking monitoring, virtually every customer's request can be easily made a reality.

All this provides great opportunities for perfectly designed, beautiful windows and optimized production processes, in order to enhance sophisticated façade constructions.

Load-bearing efficiency in a modular system.

For aluminium windows
with frame grooves from 10 to 14 mm

Load-bearing capacity:

- Up to 130 kg for turn, tilt & turn and tilt only windows

Convenience:

- Large opening angle of 110° in the turn position
- Snap-in stay locking function in the tilt position

Fabrication:

- ALU modular system: Fewer individual parts, pre-assembled components and a comprehensive range of accessories that can be freely combined
- Universal hardware for all opening variants

Installation:

- Quick assembly using clamp-on compact components
